

SAP Fiori Architecture

Web-based Entry Point for SAP Fiori Apps across Platforms and Devices

Enter to the new world of
Fiori with Powerdata

Why Fiori

- Increased productivity – faster and direct access to relevant information
- Helps users decide what needs to be done next
- Allows users to take quick and informed actions
- Increased user satisfaction

The Challenges

The client is a leading provider of products, comprehensive solutions and tailored consulting services in the casting industry, for day to day business processes were using ERP and different legacy systems to capture business transactions.

They had heterogeneous systems to capture the issues raised from customer, for supplier and from internal audit system.

This was effectively hampering tracking of issues, the root cause analysis and mitigation of the risk. Client introduces the SAP QIM system as a single source issue logging and tracking system in their system landscape to perform these activities. Client also lacked a real time tracking mechanism to identify and solve problems on the go.

Our Solution

We designed and implemented a solution using SAP FIORI to reduce turnaround times and reduce costs slippage.

We further enhanced the usability of the solution by ensuring a state of the art user interface is provided to the client to increase user engagement.

The solution is also accessible anytime anywhere on demand.

Rapid-deployment solution Service Scope Options – SAP Fiori

The Benefits

The client had a significant increase of productivity of their staff as well as reducing significantly time and cost of resolution of issues.

The data can now be termed as dynamic and independent of IT team where analysis, tracking and follow up to the person responsible to be done on real time basis.

Access to the data, on mobile phone made the client use the data on the go, thus increasing accessibility and mitigating the risks on real time basis.
