

Business Intelligence

Insurance

One of Australia's largest insurers operates several individual businesses nationally.

This involves a complex and technical data environment of multiple applications encompassing both customer facing and back end systems. With a small error potentially costing millions of dollars to this clients bottom line, they required a trusted partner who could take on this responsibility and ensure continued availability of this critical business data.

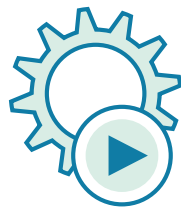

Establishing best practice in application maintenance and support procedures. Powerdata Group team were able to understand this complex environment and the potential cost a mistake could have on the business. The team quickly identified, diagnosed and resolved potential issues with no disruption.

Tackling the Problem

The business intelligence team worked closely with various departments in the development, maintenance area setting up best practice on applications such as Business Objects, Microsoft stacks, Tableau, Embarcadero and informatica. This included design - configuration them for their individual project needs.

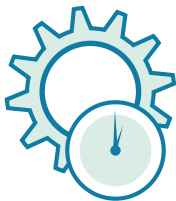

Identified Resource Bottlenecks Outcomes

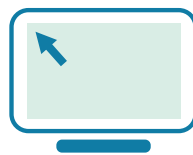

Automate Existing Processes

Build New Applications

Increase Productivity

Remove Legacy Systems

Reduce Licensing Costs

What our client thought...

Powerdata's developers and application consultants made this project a success. Their ability to advise on best practice and work in an agile way to automate our data and reporting solutions made the difference. They are excellent communicators and very customer-focused. It's a highly professional organisation and we had a lot of very positive feedback from the business.
